Code No. 18983

Anti-Rat α2, 6-Sialyltransferase (E41) Rabbit IgG Affinity Purify

Volume : 100 μg
Lot No. : 0A-623

**Introduction**

The histopathological picture of Alzheimer’s disease is characterized by senile plaques and neurofibrillary tangles, and because the senile plaques form first, they are considered the initial lesion. Senile plaques are known to be formed by accumulation of β-amyloid peptide (Aβ). Aβ peptide is produced by the cleavage of amyloid precursor protein (APP) by two types of proteolytic enzymes. The first cleavage is performed by β-secretase (BACE1), and the second γ-secretase. It is thought that their inhibitors may be capable of serving as safe drugs for the treatment of Alzheimer’s disease.

In recent years a glycosyltransferase involved in the biosynthesis of sugar chains (α2, 6-sialyltransferase) has also been shown to be cleaved by BACE1. The cleavage site was identified at the same time, and as a result it was demonstrated that in rats it produces cleaved-type α2, 6-sialyltransferase (E41 Form).

This product is purified antibody which can detect Rat α2, 6-sialyltransferase (E41 Form).

**Antigen**

Synthetic peptide for a part of Rat α2, 6-sialyltransferase (E41 Form).

**Purification**

Purified with antigen peptide

**Form**

Lyophilized product from 1% BSA in PBS containing 0.05% NaN3

**How to use**

1.0 mL deionized water will be added to the product (the conc. comes up 100 μg/mL)

**Stability**

Lyophilized product, 5 years at 2 - 8 °C
Solution, 2 years at –20 °C

**Application**

This antibody can be used for western blotting in concentration of 1-5 μg/mL, however, the dilution rate should be optimized by each laboratories.

**Specificity**

Reacts with Rat α2, 6-sialyltransferase (E41 Form).
Not cross-react with Human or Mouse

**Reference**
