

Code No. 18101

**Anti-Human
c-Kit (K963) Rabbit IgG Affinity Purify**

Volume : 100 µg

Introduction : The proto-oncogene *c-kit* encodes a transmembrane tyrosine kinase receptor, and its ligand for c-Kit receptor has been identified as the stem cell factor (SCF). Recent experimental studies have shown that c-Kit plays a key role in the development of a component of the pacemaker system that is required for generation of autonomic gut motility. These studies further suggest that interaction of the c-Kit and SCF is essential for development of enteric nervous system. Recently, it is reported that the c-Kit may be an important marker for gastrointestinal stromal tumors (GISTs) which may originate from the interstitial cells of Cajal (ICCs).

Antigen : Synthetic peptide for the C-terminal of human c-Kit
(TASSSQPLLHDDV)

Purification : Purified with antigen peptide

Form : Lyophilized product from 1 % BSA in PBS containing 0.05 % Na₃

How to use : 1.0 mL deionized water will be added to the product (the conc. comes up 100 µg /mL)

Stability : Lyophilized product, 5 years at 2 – 8 °C
: Solution, 2 years at –20 °C

Application : This antibody can be used for immunohistochemistry with formalin fixed paraffin embedded tissues. The optimal concentration is about 5 - 10 µg/mL, however, the concentration should be optimized by each laboratory.
: This antibody can be used for western blotting in concentration of 5 - 10 µg /mL.

Specificity : Human c-Kit (M.W.145 kDa) specific
